

Ordering Prints

Each of the photographs in these galleries is available as a print in a variety of sizes. Prints are available in two forms: lab prints on photographic paper and pigment inkjet prints printed on cotton rag fine art paper. Inkjet prints are custom printed and signed by the photographer.

Pigment Inkjet Prints

Printed on archival quality, fine-art paper and using pigment inks, these prints won't fade quickly like many desktop printers which use dye ink on glossy coated photo paper from the office supply store. This format offers beautiful and smooth colors and tones, and much flexibility on image size. These prints will be beautiful for years and decades (100+ years) to come. They will also be produced and signed by the photographer.

The pigment inkjet prints are available in sizes up to 12" × 18" to suit the location you plan to display the photograph.

To order one of these prints, please contact the photographer, Mark C. Christianson, about the image and size you would like to purchase. Your print can also be mounted in custom cut white mats ready for you to frame. Currently, only color prints are available.

Lab Prints

These prints are made on Kodak Professional Supra Endura VC Digital paper (or Ilford True Digital Black and White paper for black and white photos). These prints will ship to you directly from the photo lab within a few days.

To order a print from the galleries, display your choice of image and click the shopping cart icon with the words "Add to Cart" in the upper right of the webpage, above the thumbnail section. A shopping cart icon will also be displayed on the left edge of a photo when you mouse over the image. You will be prompted to choose a size and quantity. You can adjust cropping and choose other options, such as matting and framing when you check out.
